DIGITAL EQUIPMENT CORPORATION, MAYNARD, MA 01754-2198

THE NEW VAXSTATION 2000 WORKSTATION, announced today by Digital Equipment Corporation, is a VAX-based, 32-bit workstation which offers CPU performance equal to Digital's MicroVAX II system, but fits easily on a desk. This new desktop workstation is the entry-level member and newest, fully compatible member of Digital's extended family of VAX-based workstations. The system screen above displays PADL-II, a solids modeling application from the University of Rochester.
