

NOTEJET II 486C

**The Canon® NoteJet™ II 486C is a full-featured color 486 computer with a built-in high resolution monochrome Bubble Jet™ printer that compromises nothing. Its rugged and lightweight notebook-sized design now makes it easy, practical and affordable to print out professional looking letter and legal size documents and transparencies, no matter where you are. And with the addition of an optional plug-in fax modem card, the NoteJet II 486C is transformed into a portable plain paper fax machine, setting a new standard in the world of mobile computing.**

### Only Canon Can

For years, Canon's acclaimed Bubble Jet printing technology has been setting the standards for performance in portable printers. More recently, Canon has developed the Innova PCs — a full line of high performance desktop and notebook computers. Only Canon can combine these two proven technologies to produce this new breed of portable computing, at an affordable price.

### The Inside Story

The NoteJet II 486C compromises nothing. At the heart is an IBM 486SLC2 50MHz processor, with 16 KB internal cache and 4MB RAM that you can easily expand to 12MB. There are also two choices of hard drives to fit your storage needs: 130MB and 260MB.

### Room To Grow

With two PCMCIA Type II slots or one Type III slot, you can plug in fax/data modem, network interface cards and other options, which makes the NoteJet II 486C not just a portable, but also a versatile computing solution.

### See What You Think

The NoteJet II 486C has a dual scan color, 10.3" backlit LCD screen at 640 x 480 VGA resolution. And with the unique and user friendly "Joystick" pointing device and Windows® accelerator chip, you'll find it's quick and easy to point and click your way through the pre-installed Windows version 3.11 program.

### An Amazingly Small Printer That's Big On Quality

The remarkable micro-printer inside the NoteJet II 486C is 70% smaller than any Canon Bubble Jet printer ever made. And although it's small in size, it's big on print quality and speed. It can produce high resolution, 360 dpi output on plain letter or legal size paper, and even transparencies at 116 cps. And for longer documents, the NoteJet II 486C has a built-in 10 sheet, letter size automatic feeder.

### Express Printing With "Express Bus" Technology

With Canon's exclusive "Express Bus" technology, the NoteJet II 486C achieves throughput two to three times faster than conventional portable printers and PCs. That's because it eliminates the slow parallel interface cable, and quickly processes print data with a unique print driver chip. So you don't have to waste time waiting for your printout.

### Open An Office Anywhere

The NoteJet II 486C is more than portable, it's practical. At 8.6 lbs., it's both considerably lighter and less bulky than carrying a separate notebook and portable printer. With the addition of the optional fax/data modem, the NoteJet II 486C lets you send, receive, store and even print out plain paper fax virtually anywhere, anytime.

### Longer Lasting Performance

To keep you up and running longer, the NoteJet II 486C comes with a rechargeable NiCad battery that lasts up to 4 hours. And a built-in feature that manages the energy consumption of both the PC and the printer for better performance. An AC adapter is also included.

### We Wrote The Book On Endurance

When you've sold more portable printers in the world than anyone else, you learn how to build products that stand up to the rigors of the road. Which is why we can back the NoteJet II 486C with a trusted one year limited warranty. And should you ever need service, the NoteJet II 486C comes with two programs: a 24 hour Roadside Replacement service and a Mail-In service that will repair your unit within 72 hours.

### COMPUTER SPECIFICATIONS

<b>Processor</b>	IBM 486SLC2 at 50MHz with 16KB Internal Cache
<b>Memory</b>	4MB standard, expandable to 12MB
<b>Floppy Drive</b>	3.5" 1.44MB or 720KB capacity
<b>Hard Drive</b>	130MB or 260MB
