**MicroPro[®] Product Catalog
for the AS-100**

SPRING, 1983

Family of MicroPro Software Programs Are Now Available for the Canon AS-100

The world famous WORDSTAR, MAILMERGE, SPELLSTAR and other MicroPro Products can be run on Canon's newest, 16-bit microcomputer — the AS-100.

Especially, WORDSTAR is fully implemented for the AS-100. That is, color representation is visualized and it becomes a full function word-processor when connected with Canon Electronic Typewriter. So, you can enjoy working with it and increase the productivity of your work on the AS-100.

WORDSTAR®

This best-selling program helps your microcomputer turn out results you'd expect from an expensive dedicated word processing system.

It's so simple and easy to learn and use that you can turn out memos and letters immediately. Yet it has such power and sophistication that you can use it to write books—even annual reports with columns of numbers.

What makes WordStar the leading word processing program?

User-friendly features and benefits like:

- Simple commands with instantaneous response.
- You see onscreen exactly what you print.
- Fast, flexible formatting.
- Simultaneous printing and editing.
- Column and block move.
- Convenient Help Menus in plain English.
- Special print effects.

And WordStar comes complete with an easy-to-understand User Manual, Training Guide, Reference Card and keytop labels. With WordStar you'll turn out impressive, professional-looking documents every time.

MAILMERGE®

This WordStar option is a multi-purpose file merging program which helps you produce customized form letters for mass mailings—at a fraction of the time and expense of individually typed letters.

Other applications include assembling documents from boilerplate paragraphs or printing invoices from DataStar files.

CALCSTAR™

This advanced electronic spreadsheet is powerful, yet easy to learn and use. For rapid calculations with instantaneous answers to your "What if" questions, CalcStar is a business planning tool with many important features, including:

- Flexible spreadsheet formatting with variable column width and decimal precision.
- Edit line Scratch Pad allowing CalcStar to function as a calculator.
- Conditional logic allowing you to test the contents of any worksheet cell.
- Advanced math capability including logarithms, exponents and linear regression.
- The ability to merge sections from several spreadsheets into an overall final report.
- Automatic Form Mode which guides operators to the next data entry location automatically.

For forecasts, plans, reports, estimates, studies and analyses, CalcStar relieves you of the drudgery of endless recalculation, leaving you with more creative thinking time. And since CalcStar is compatible with WordStar, your spreadsheets can have professional touches like **boldface** and underlining prior to including them in your proposals, marketing plans, or annual reports.

MICROPRO, WORDSTAR, SUPERSORT, MAILMERGE, WORDMASTER are registered trademarks of MICROPRO.

CALCSTAR, DATASTAR, SPELLSTAR are trademarks of MICROPRO.

SUPERSORT™

SuperSort combines speed and flexibility in sorting, merging and selecting information from data files.

With SuperSort you can sort and merge up to 32 files into a single file at a rate of at least 560 records a minute. That's 10 times faster than a BASIC language sort program! One simple and efficient operation integrates new records into a master file quickly.

SuperSort accepts just about any kind of record you can imagine. The data can be justified, and can include floating decimals, exponential notation, or upper- and lower-case letters; data can even be in several standard formats—binary, bcd, ASCII, etc.

You don't waste time translating your records for the computer. And you can specify up to 32 selection criteria.

SuperSort is simple to use. Sort and merge instructions are easy to enter. Errors are pointed out on the screen and easily corrected. And if you give SuperSort instructions it can't follow, you get a help message in English.

DATASTAR™

This powerful data-handling program allows you to enter, retrieve and update data with incredible speed and flexibility. DataStar software doesn't lock you into set forms. Instead, you can design your forms to match your needs. Sample forms are provided to guide you.

DataStar provides the power and versatility usually found in mainframe and minicomputer systems—with several ways of safeguarding accurate data entry, tremendous flexibility in searching for records, and detailed onscreen help messages.

SPELLSTAR™

This WordStar option is your "proofreader on a disk." It rapidly compares every word in your document against its dictionary of the 30,000 most commonly used English words (based upon the American Heritage Dictionaries published by Houghton Mifflin).

When it reaches a misspelled word or typo, SpellStar flags the mistake. You can change it. Leave it as is. Or, if it is a client name, trademark, or other special term you don't want flagged again, add it to the main dictionary or put it in a supplemental dictionary. If error-free documents are important for you, then SpellStar is a WordStar option that's a must!

WORDMASTER™

This full screen program editor for programmers is both easy to learn and use. Three modes offer you flexibility: Command mode lets you enter or execute any editing commands. Insert mode accommodates high speed data entry. Video mode displays a portion of the file onscreen which is continuously updated as changes are made in the file.

WordMaster's Scratchpad Memory lets you temporarily store text for later insertion—any number of times—into the file you're editing. You can also enter complex strings of commands for later execution. Global Find/Replace capability is built in.

WordMaster features extensive macro command capability for file manipulation.

All this sophistication is easy to use with onscreen help menus, bi-directional file scrolling, and complete User Manual. At the end of an edit, a backup is automatically generated thus preventing loss of data.

MicroPro Software Programs Form an Integrated Family

All MicroPro programs are designed to work together as well as they work with you.

They are designed for the non-technical user. Training guides, onscreen menus, Help screens, and easy-to-understand User Manuals help you become comfortable and in control right from the start. And when you learn one program, you learn them all. Because they all work the same way.

Yet each program has the advanced features to help you accomplish sophisticated tasks in a lot less time. So no matter what size business you work in, you'll be more productive in communications, business planning and financial management with MicroPro products.
